## **[Annotations for My Creative Research](#)**

This article gives a list of many tips to help kids gain creativity in the classroom. What my team and I did, (Zach ad Trip), was we looked at the tips and commented on how we feel they would work and any notes about why we think that would work or not. Personally, the main focus to this article was that there were great tips, but it is important to start these habits as a young child so that the habits become normal in more serious situations like high school and college.
